Traci, Unfortunately I still have not resolved the 70 year mean harmonic flow estimations yet. I spoke with Bill Beckwith from our office regarding the factor that should be applied to the 7Q10 for carcinogens and non-carcinogens and he said that it is 3 for both. Apparently this was a guidance change implemented by letter following the 1991 Technical Support Document for Water Quality Based Toxic Control. He did not seem aware of the factor of 1.4 or 2 times the 7Q10. He said that you could call him to discuss if there are any questions. 617-918-1544

I am trying to provide direction for MacDermid to make these calculations but want it consistent with what CT is requiring for the RSRs. I am not as concerned with what EPA recommendations are. Could you please verify what CT would be requiring for the RSRs.

Thanks

Carolyn
